OVERVIEW

The webfact Group has been a major player in the online industry for over a decade – a lifetime in terms of the Internet.

More than ten
years of online
experience

During this time, we have been able to garner and acquire knowledge and experience from our wide variety of clients and customers; from personal websites for individuals, to creating complete online platforms for multinational companies. The webfact Group is a full service provider, working with clients in Europe and the US, from the early stages of concept development of a project, to building business strategy, to completion of the project. We then continue with our clients, following through with additional consultancy and guidance.

360° web services

webfact Solutions provides full-service in the following fields: IPTV, Video Engine, HD Video, Video Portal and more. The different units of webfact, each with its own area of functions and expertise, allow for a constant exchange of ideas and brainstorming between our employees, ultimately creating the best product for our clients, both in Europe and in the US.

WEBFACT VENTURES – TECHNOLOGY MEETS VENTURE

In 2007 webfact created a new unit – webfact Ventures. This new unit is designed to work with the leaders of the global web-based start-up and investor market, in order to bring to life new Internet projects and entities. webfact ventures gives allows us to develop ideas from seed stage to fully-functional entities, along the way providing technological and business consultancy and support.

Berlin & San
Francisco

With our HQ in Berlin, the heart of Europe along with a comprehensive US contact network and a satellite in San Francisco, we are able to expand the global reach of our projects. The main target of our Berlin HQ is to bring promising Start-Ups and ideas from Europe to the US. Access to the US market comes from our San Francisco Satellite, constantly scanning the local Start-Up scene for new ideas, with potential for international growth.

WEBFACT VENTURES – INCUBATE

Protecting
investments

The development of Start-Ups and new ideas does not stop after the funding stage. On the contrary, it is a very delicate process, with several different variables. Realizing this, we established a sub-unit within webfact Ventures, focused solely on providing Start-Ups, as well as existing companies, a full full-service package.

webfact Incubate, provides all crucial elements and facilities, including office space, legal & financial consultancy, as well as access to our network. With this package of services, Incubate is able to protect investments, guaranteeing maximum security.

Fulfilling entrepreneurial dreams is often dependant on financial needs. On the other hand, web investors are looking more and more at enhancing the security of their investments. webfact Ventures is currently in the process of combing these needs, by setting up two closed investment funds, creating a package of investment security and financial resources. More details on these funds will be available shortly.

WEBFACT LABS– CUTTING EDGE R&D

webfact will be the technological arm of webfact, with its main goals being to create viable and sustainable technology solutions in the field of online video content. Through constant creation and innovation, and most importantly, with passion, webfact Labs will strive to create a better online video experience.

Research &
Development

webfact Labs will bring together the most talented programmers, producing and developing new stand-alone products, and generating income through license selling and royalties.

webfact Labs will focus on four topics within the field of online video: Video Enabling Solutions, Online Advertisement Solutions, Search Algorithms and Video Content Integration within Social Networking Portals. We have identified these fields as the most relevant and attractive areas on the online video content.
